

Project Initialization and Planning Phase

Date	26 June 2026
Team ID	[Enter Team ID]
Project Name	HDI Predictor
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The HDI Predictor uses machine learning to evaluate country development indicators and predict Human Development Index (HDI) scores and development tiers. The goal is to automate data-gathering analysis, compare model accuracy, and provide policy researchers and students with a fast and interactive scenario simulator.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policy researcher or developmental economics student.	Evaluate global quality-of-life and socio-economic progress of nations beyond simple GDP figures.	Calculating the Human Development Index (HDI) dynamically is slow, requiring consolidation of multiple indexes, and UNDP reports are published with a significant lag.	Historical data has complex, non-linear dependencies (education, health, GNI, gender indices), and tools to simulate hypothetical policy improvements are hard to access.	Frustrated by the lack of immediate, interactive predictive feedback and the inability to quickly test scenario-based policies.
